

Incralac Spray Lacquer

Application Instructions

Tips Before Starting

- Ensure the surface is **dry**, clean (polish first if needed) and dust free.
- Read through instructions before starting
- Two **light** coats should suffice; the first coat should be applied in a top-to-bottom fashion. The second coat should be applied side-to-side; waiting approximately 20 minutes between coats.

Application Directions

1. Ensure that the surface is free of dirt, grease, wax and grime.
2. Shake well - allow agitator to rattle for at least two minutes.
3. For best results, use when temperature is between 65°F and 95°F. Avoid using during high humidity.
4. Holding the can approximately 10 inches from the surface, depress the valve completely to avoid reduced pressure, resulting in faulty spray.
5. To prevent sags and runs, use short dusting strokes allowing Incralac to become tacky between light mist coats.
6. To prevent clogging, clean nozzle after each use. Invert can and spray approximately three seconds until mist becomes clear.
7. Discard empty can in trash pick-up. Do not place in garbage compactor.
