

Natural Birch

WDMA TR-8 Factory Finish

This veneer samples below illustrate the basic color and gloss of our TR-8 finish. There may be definite variation of color in the finished product, due to the natural variations in the color of the doorskin, grain density, and grain texture. Stain bases, topcoat compounds, and lighting conditions can combine to make exact color matching nearly impossible. The manufacturer cannot guarantee that the images below accurately represent the product color or grain samples. Upon request we will supply you with samples which will accurately display colors and illustrate this variance.

Our factory finished doors achieve the best overall door appearance and durability available.

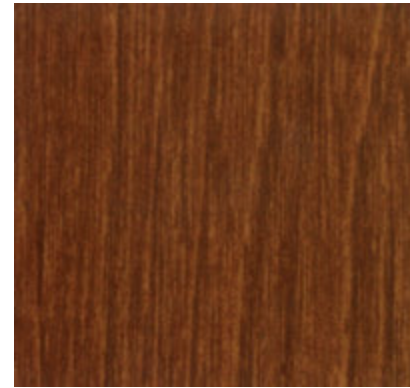

Environmentally friendly UV cured finish to meet WDMA TR-8 and AWS System 9 is standard and is available in this popular range of colors.

Custom color matching is also available to fit your custom needs.

These color chips are a typical representation of the actual finish. Color variation from door to door due to veneers from different logs, color variation within veneers from the same log, and variations from heartwood and sapwood, can also cause differences in appearance from door to door and are acceptable. Samples for final approval are available upon request.
